Finalize your project with an automated swing door solution from GEZE

Swing doors in numerous variants guide us comfortably through daily life. Swing doors – be it as a barrier-free automatic door in private or public buildings, where doors should be opened with absolutely no effort, or varieties that are equipped with a door closer for manual opening: Door technology and drive systems by GEZE open and close swing doors comfortably, safely and in line with your individual requirement.

PRESS RELEASE

December 2021

With GEZE automatic door solutions you combine barrier free access with a great variety of functions and elegant door design. For the door to meet the required functionality, it is important to consider all aspects before completing the purchase. GEZE has many examples of industry solutions, ready to meet your requirements. Our product experts are always available to support you in your project. Configuration of the drive to meet your specific project demands is our specialty.

The right swing door solution for your project

With swing door systems from GEZE, you'll find a system solution for your building, with which single and multi-leaf sliding doors and even fire protection doors can open and close automatically. Slimdrive EMD-F is a very safe and reliable automatic system that can easily be used on doors with a high-access frequency. Its powerful drive, durable gear and intelligent electronic control ensure many years of trouble-free operation. Slimdrive EMD-F has a built-in closure spring that ensures door closure in the event of a power outage. The controller has a built-in fire card for direct connection of ABDL systems to fire doors.

We priorities safety on the automatic doors

Door safety is of high importance to avoid injuries from contact between a person and the door. According to EN16005, it is the building type which specifies the tolerated contact between an automatic door and the user. The general rule is that when a large proportion of the users are elderly, infirm, disabled persons and young children any contact of the door-set with the user is unacceptable. At the same time, the law differs between public buildings with access for everyone and private buildings with restricted access. Choosing the right safety sensor, is critical for the door to operate according to EN 16005. At GEZE we are trained to advise you in door safety, and we provide a comprehensive range of safety sensors.

At GEZE, our goal is your long-term satisfaction, and we want our products to meet your needs in a reliable and trouble-free way. Therefore, local GEZE experts are always available to guide you on which products to select to your door project.
